

Beach Bump

Bump is a fast paced math game for two players. Each pair will need three dice for the addition version and 2 dice for the multiplication version along with a set of 10 markers of one type or color for each player. I use Unifix pop cubes, but yellow / red counters and see-through colored disks work great too.

A multiplication, addition and blank board for you to customize are included. Due to copyright and graphics licensing requirements, I can not send editable versions, but you can print the blank board and use colorful markers to write on the board to fit your needs.

Enjoy!

Beach Bump

addition

How to play: Roll three number cubes and add those numbers. Cover that space with your marker. You can bump your partner's color and take their space! If you cover a space with two markers stacked on top of each other, you lock that space and it can't be bumped. The player to use all ten of their markers first is the winner!
